

# Icelandic Northern Lights as musical inspiration!?!

**Skálar | Sound Art | Experimental Music** offers a charming residency house for composers and sound artists in the artistic town Seyðisfjörður, East Iceland from September 1, until December 31, 2018.

We are located in the small town of Seyðisfjörður, East Iceland, a bohemian and cosmopolitan village of approximately 600 people. The town is nestled at the mouth of a long deep fjord framed by steep mountains, just shy of the Arctic circle in a unique setting that at times can feel as well as be quite remote due to weather conditions and the shifts in light from summer to winter. Seyðisfjörður is also the port of call for the only weekly ferry connection between Denmark, Faroe Islands and Iceland, and home to several other artist-run centers, and the Technical Museum of East Iceland. For these reasons, the town feels both unique and connected, and is a special place to experience the intensity and beauty of the volatile northern landscape. Residents are highly encouraged to stay for more than a month, in order to deepen their experience of the place and its tempo.

Our residency is a cosy house by the river near the mouth of the fjord, suitable for one or two individuals or a couple (the house can also accommodate children). The main room is an open kitchen and workspace with basic sound equipment set up, with view over the garden and river.

Above is a mezzanine with a double bed, and a second room which can be used as an additional workspace or bedroom with two single beds. The bathroom includes bathtub/shower and a washing machine. There is also an additional room facing the river which is painted white and left empty for use as either atelier or gallery and presentation space. Utilities and high speed internet included in rental.
